**ENGELBERT BRANCH/ MALE/ 53 YEARS/ HOSP NO: 157622
MEDICAL REPORT**

The above named 59 years-old male is a patient of the hospital being managed for Neurofibromatosis type-II by the Neurosurgery team.

Patient presented to the hospital with complaints of progressive loss of vision on the right eye and hearing loss over two years duration.

Magnetic resonance imaging of the brain showed multiple extra-axial mass lesions suggestive of Meningioma involving the tentorial, right optic nerve sheath, olfactory and temporal lobes.

Risks and benefits of surgery has been explained to patient and his relatives.

Kindly accord necessary assistance.

Please find attached the medical report from the Consultant of his care.

Thank you.
